

TPS Publishing Inc. Education for Careers

Now approved in California for A-G

Forensic Science:

Scientific inquiry is at the heart of Forensic Science. In our Forensic Science program, students, just as the professionals in the field, develop testable hypotheses and create logical connections between the design of the activity and the underlying scientific concepts. Students carry out investigations, collect and analyze data, formulate explanations, revising their hypotheses if necessary, re-work their investigations, and draw conclusions.

Law Enforcement I and II:

TPS Publishing Inc. has created STEAM activity books for high school students. They are inquiry based and will develop student critical thinking skills. There are activities involving individual, paired and group methods. The activities involve role play, essay writing, creation of information posters, and practice tests.

Criminal Investigation:

This program allows students to use and refine already acquired science process skills such as observing, inferring, analyzing, evaluating, as well as those technical skills specific to criminal investigation, in order to solve crimes. We have endeavored to keep our offering interesting to students, and teachers alike, by including real life cases as well as a wide variety of activities and assignments, some of which include; role play, essay writing, use of the arts, as well as the more traditional practice tests. Throughout the course vocabulary is a central focus. ELPS are directly written to, including numerous other language learning techniques. Students will discover that 'real-world' investigation requires a great deal of creativity needing knowledge from all fields of science to make their own meaning about tasks and come to conclusions.

Principles of Law, Public Safety, Corrections, and Security:

The text is structured to be user friendly for all teachers, irrespective of their background, and is simpler for students than many alternative texts. Vocabulary is a key focus, with a word wall, with terms and definitions, is built where those terms are applied. This will assist all students but in particular will help students who struggle with English language.

**Materials are available in hardback or softback, as digital only or a mixture of formats.
Powerpoints, assessments and readers are also available**

& enter quantity.
Let TPS do the rest!**

It is inquiry based and will develop student critical thinking skills. For the majority there is an activity involving individual, paired and group methods. The activities involve role play, essay writing, creation of information posters, and practice tests.

The program provides interesting scenarios for student study, and requires a high level of research, documentation and use of Mathematics, English Language, Science, Technology and Arts. It is an innovative program, enabling students to achieve high success in their course work and examinations. TPS provide excellent professional development for all teachers, students and parents and run workshops to assist implementation and maintenance of the program.

When you purchase the program you receive ongoing support via a 24 hour telephone helpline from TPS.

The program is available now and pricing starts at \$69 per student for black and white printed versions. Order before end December, 2019 and receive a 10% discount - **Quote discount code LAWNOV19**

Your personalized log-on information and digital access to view the full program and all CTE offerings.
