

TPS Publishing Inc. and partners are proud to present
THEIR HOMESCHOOL STEAM PROJECTS WITH PERSONALIZED KITS.
**Purchase your NGSS Science and State Aligned Mathematics Textbooks
and only the materials you need for your family!**

TPS Publishing Inc. and partners have constructed the 'STEAM into NGSS' integrated program and 'Creative Science Topical Steam' program with the intent to enhance the Science learning and teaching. By aligning to the requirements of NGSS we enable parents to assist children in the application of Science content, and the preparation for and passing of tests.

The program has been built through a collaborative effort of partner companies, each of which have expertise in Science instructional design. All companies share a commitment to inquiry and activity-based instruction. The diversity of the writers and their perspectives ensures that the material is inclusive.

NOT JUST A TEXTBOOK...Parent's Toolbox and with ongoing support during the educational year.

Within the TPS toolbox for each grade you will find inquiry based components.

Traditional lesson plans – Provided by TPS with 'Science is a Verb' labs, activities, literacy links, expository text and homework.

STEM project based learning cycles – CeMaST provide inquiry-based activities, via learning cycles, especially useful as an introduction to a concept, visual assessment, and a tool for learners.

Arts projects – Aligned to each of the K-8 standards. TPS, together with authors from the Otay Ranch Academy for the Arts, provide art seeds to deliver science. With Action Based Curriculum and Ellison Inc. , TPS provide nasen approved projects, which are by standard visual assessment tools, inclusive and particularly useful for below grade, ELL and special education students.

Kits – Our kits are organized by grade and subject.

CAREER TECHNOLOGY EDUCATION

TPS Publishing Inc. has created and had adopted high school activity based materials for the following Career and Technical Education courses;

- **Principles of Law, Public Safety, Corrections, and Security**
- **Law Enforcement I**
- **Criminal Investigation**
- **Forensic Science**

Scientific inquiry is at the heart of Forensic Science. In our Forensic Science program, students, just as the professionals in the field, develop testable hypotheses and create logical connections between the design of the activity and the underlying scientific concepts. Students carry out investigations, collect and analyze data, formulate explanations, revising their hypothesis if necessary, re-work their investigation, and draw conclusions.

Each of our Teacher Editions are full of detail and instruction, along with hand-outs, section tests and unit exams. The Student Editions consist of fun and informative investigations that enable continuous activities to aid learning and provide lots of practice of forensic investigation.

We also provide 100 'Do Nows', and a Forensic Club book for end of year or after school use.

TPS Publishing Inc. is the only supplier adopted in Texas for Law Enforcement I and Criminal Investigation.
We are also adopted for Forensic Science as well as PLPS.

State Adopted K-8 Creative Curriculum for Mathematics STEAM Program

Our state adopted Math program has been approached in the same manner, and with the same ideals, as our Science program. Once again, the program has been built through a collaborative effort by partner companies, each of which have expertise in Math instructional design. They share a commitment to inquiry and activity-based instruction. The diversity of writers and perspectives ensures that the material is fully inclusive.

Your personalized log-on information and digital access to view the full programs.

Please know that TPS does not just drop ship and run!
We offer a 24 hour help line and ongoing P.D. comes with our programs.

TPS Inteactive Test Prep.

With our partner Plum Networks, we have created our Web Based Test Prep Platform. A test preparation system that is exactly aligned to state adopted Mathematics, Science, Forensic Science and other CTE courses. Includes Common Core Mathematics and NGSS Science.

- Us tests created for you by TPS
- Math, NGSS and CTE tests available
- Build you own tests and add you own questions
- Marks and grades the test for the student
- Home school, School and District licensed

TPS Nursery programs

We all know that our children develop at different speeds and learn in different ways. TPS has created a STEAM program for babies through to TK with the intent of ensuring that children entering TK can already count to 30 and know their letters in addition to being self assured and happy. The three key areas of the program are:

- Nursery
- Little League
- Brainsprouts
